

Up to 45% less energy cost from

oven

Up to 30% less air consumption

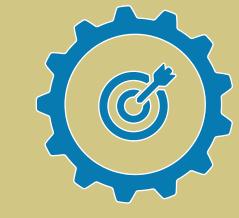

### Smart Maintenance

Up to 20 minutes to change mold

**Up to 80% less maintainance cost** 

### Smart Results

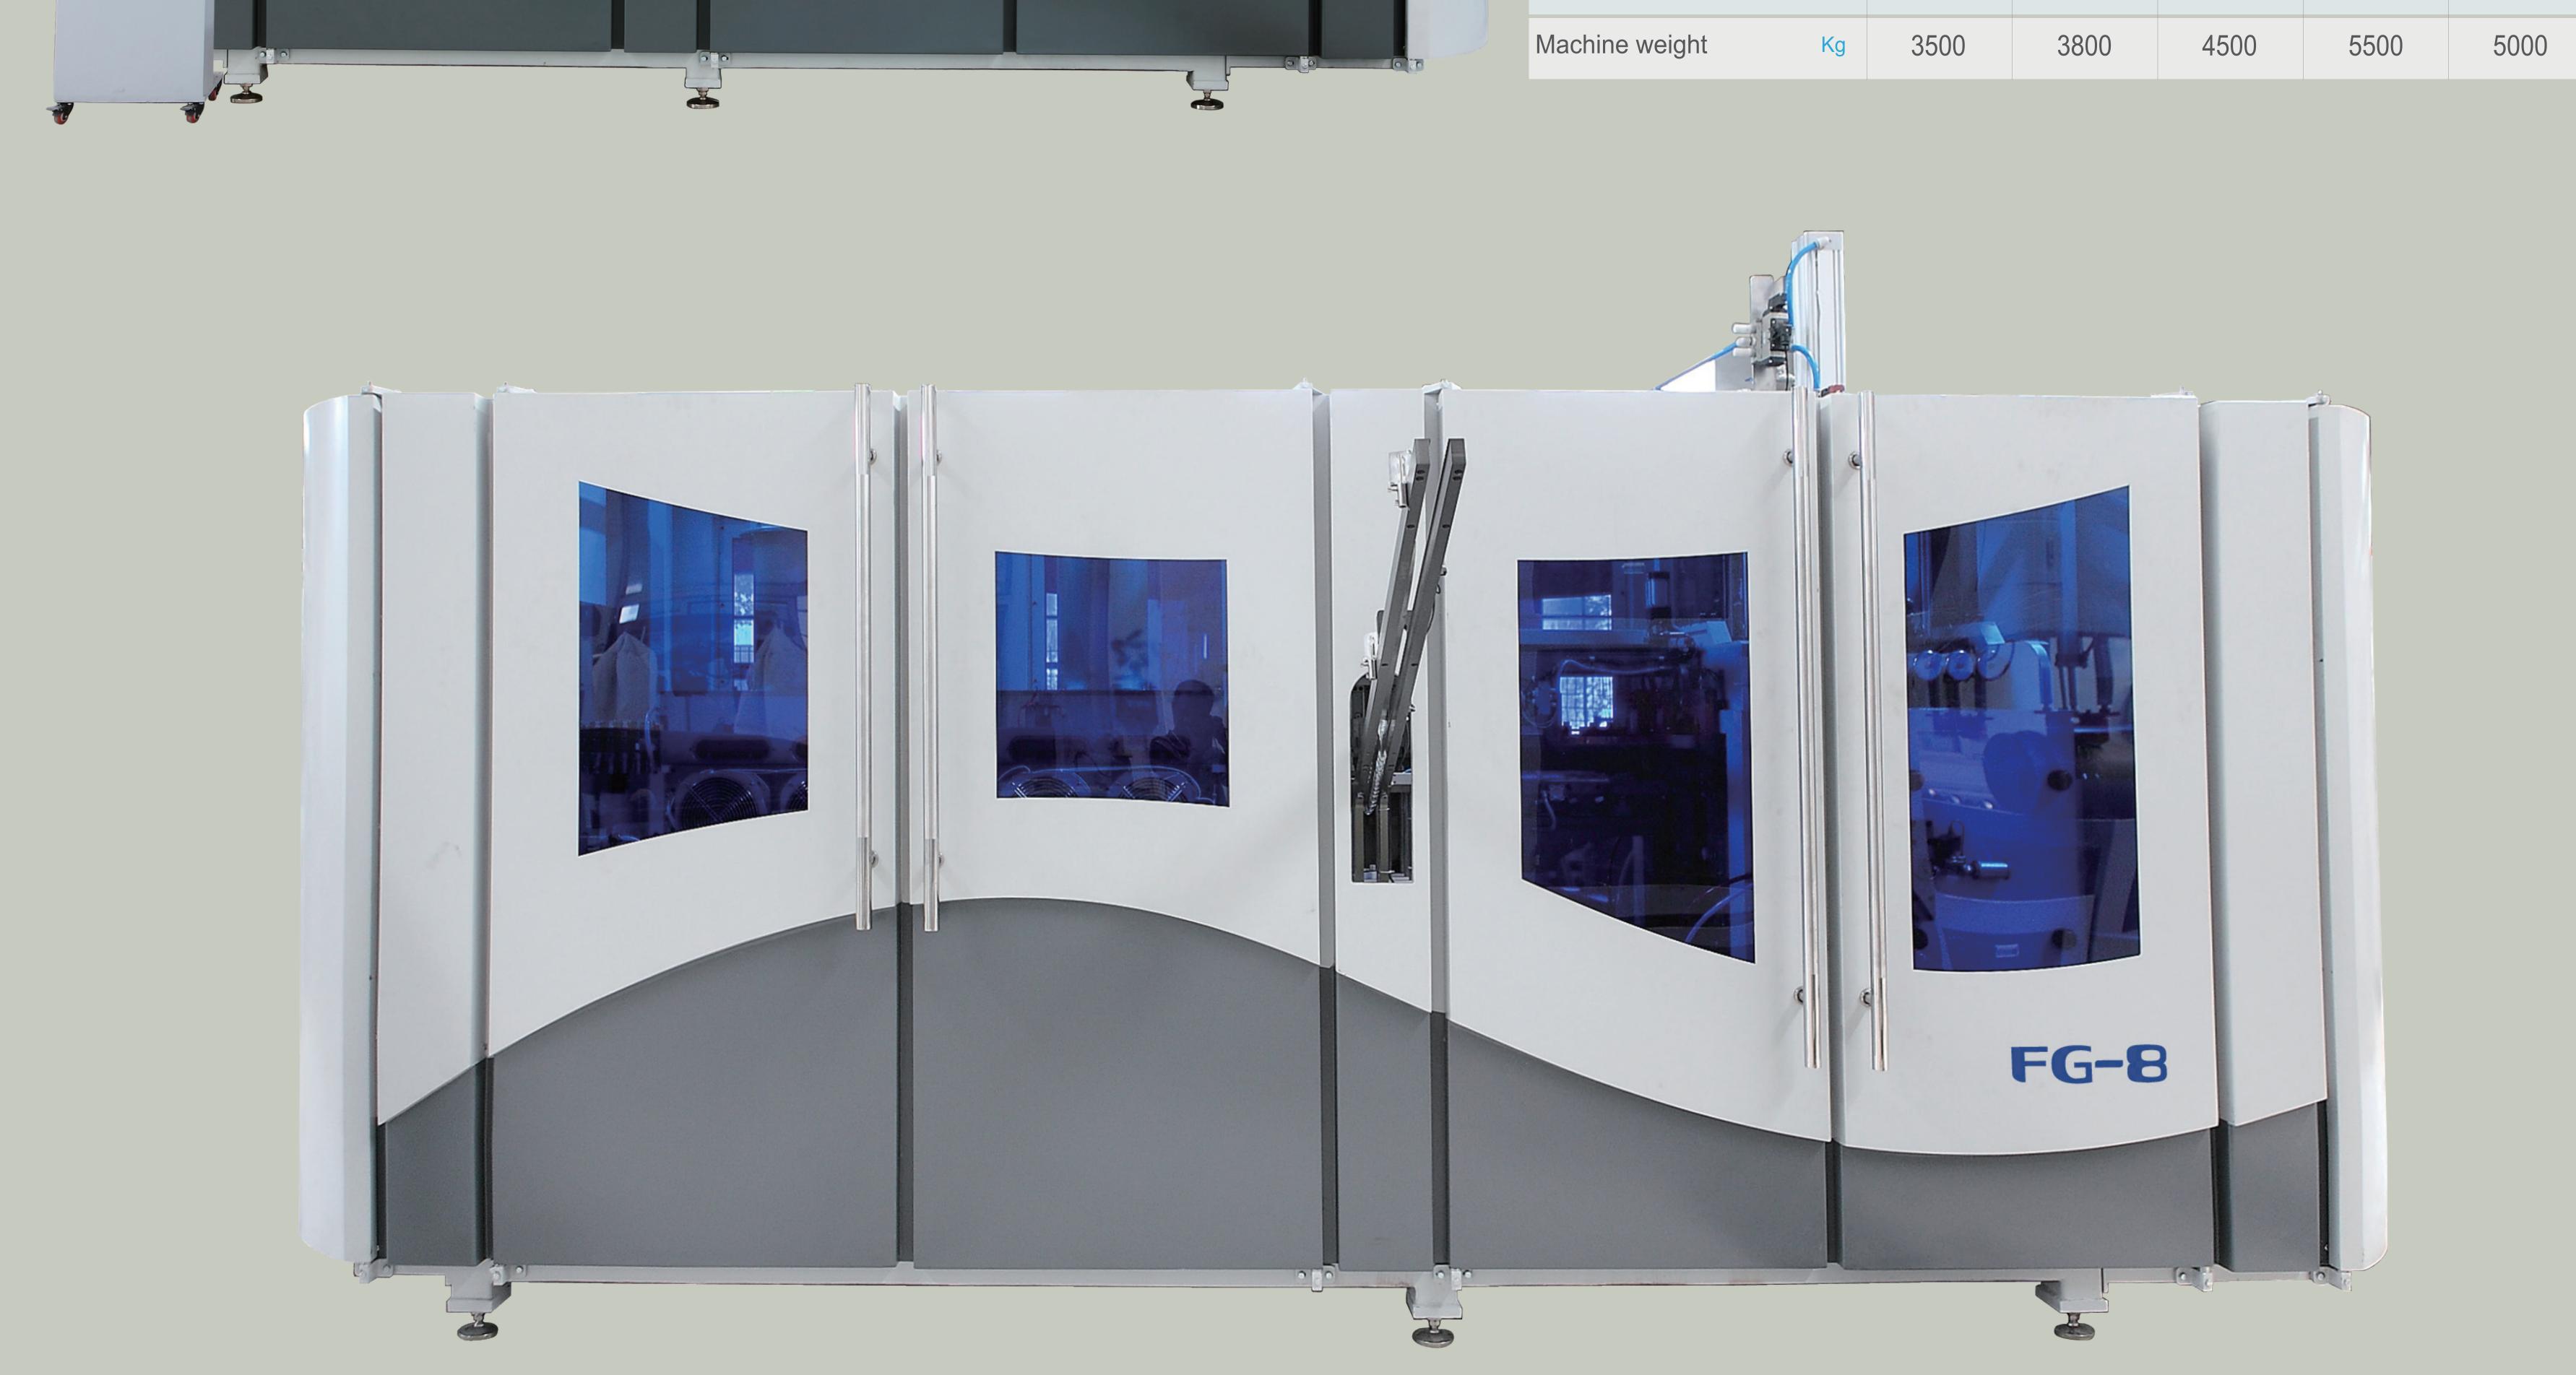

Up to 99. 9% qualified rate

Up to 40. 0% more speed

### ACHIEVE MEASURABLE results

Up to 45% less energy from heating

Up to 30% less air

This machine is fully driven by servo motor, no need low pressure air

We also decrease the dead volume in the blowing station to reduce high pressure air consumption

#### Up to 20 mins to change mold

What if you could change your mold quicker than your lunch break? With our special quick-mold-change design, mold can slide into position with ease and can be changed within 20 minutes

#### Up to 80% less maintenance cost

Changing new air cylinders and seal rings is the main maintain cost in blower We use servo motors, t is more reliable and almost no need maintain cost

## DISCOVER HIDDEN COST

When it comes to bottling drinks production, 70% energy occurs at the blower.

Lines are expected to continuously produce more with less. Besides maximize the capacity, it is also important to minimize the usage cost.
